

CapCut is a powerful video generation tool that uses artificial intelligence to create videos based on user input. It's an all-in-one solution that allows users to describe the theme or content they want in their video, and the plugin does the rest. It's perfect for content creators who focus on explanatory videos and want to improve their productivity. CapCut is continuously expanding its capabilities in video and image creation, so stay tuned for more!

CapCut is a powerful video generation tool that can create videos based on user input. Here's a brief overview of what it can do:

- Content-Based Generation:** CapCut can match materials from its library based on the content you provide and automatically generate a video.
- Versatility:** You can describe the theme or content you want in the video, such as "I want to create a video introducing a product" or "Help me generate a video explaining a topic."
- Customization:** You can specify the type of video, the target audience, video dimensions, and other requirements.
- Automated Scripting:** The model will generate a voiceover script based on your needs, intelligently match related materials, voiceovers, subtitles, and more to produce a complete video.
- Viewing and Editing:** CapCut provides a link to view the generated video. You can view the video content through this link and make modifications or download it if needed.
- Ideal for Content Creators:** CapCut is especially suitable for users who create videos through voiceover scripts. For instance, creators who focus on content

explanation can quickly generate satisfactory videos, enhancing their productivity.

### **How to use:**

**Installation:** Users can either search for CapCut in the ChatGPT plugin store or simply press the "try it" button at the top right of this page to start a chat with the plugin already activated.

**Video Theme or Script:** Input the desired video theme or script. The plugin can generate a script based on a given theme, or you can provide a complete script yourself.

**Video Attributes:** Specify your desired video attributes, including aspect ratio and the platform where you plan to publish the video. If these attributes are not provided, the plugin will generate the video using default settings.

**Generate Video:** Once all necessary information is provided, the plugin will automatically start generating the video. This process may take approximately one minute.

**Video Link:** After the video generation begins, the plugin will provide a link where you can view the video.

**Edit and Download:** Log into CapCut through the provided link to freely edit the generated video. You can then download or publish the video directly.

Prompt examples:

"Generate a video about the history of the internet."

"Create a video explaining how to use the CapCut plugin."

By using the CapCut plugin, you can transform your video ideas into polished content with minimal effort. Whether you're a content creator looking to streamline your

process or a business owner wanting to create engaging promotional videos, CapCut is a tool worth exploring.
